

# COMMERCIAL ENERGY CONSULTING

## Energy Management and Construction

Commercial Energy Consulting represents and assists business owners in identifying, quantifying, and implementing energy and water saving measures. We deliver complete power, thermal and HVAC solutions for commercial and industrial operations. Our end game? Helping you run a more efficient and profitable enterprise.

We can assist you with the following and more:

- Mechanical energy system design and implementation
- Energy codes, inspections, economic analysis, and calculations
- Renewable technologies, Energy Star and carbon reporting
- Incentives, grants, and financing
- Solar energy, hydronic heating, cooling and steam systems, backup generators, energy storage

# COMMERCIAL ENERGY CONSULTING

## DESIGN

We specialize in custom mechanical and energy systems designed to maximize outputs and minimize inputs. CEC creates energy systems that support your portfolio's requirements through right engineering calculations, custom designs that meet your goals, and budget solutions that optimize operations while supporting growth.

CEC brings your projects to fruition by securing incentive dollars, managing plans, permitting, subcontractors and inspections, and ensuring actual installations meet design objectives.

custom designs that meet your goals, and budget solutions that optimize operations while supporting growth.

## INSTALLATION

CEC brings your projects to fruition by securing incentive dollars, managing plans, permitting, subcontractors and inspections, and ensuring actual installations meet design objectives.

providing monitoring systems to track and tune operations, equipment maintenance, retro-commissioning and upgrades, and generator, solar and back-up power.

## OPTIMIZATION

We tune and modify existing systems to evolving needs, capturing the highest equipment performance. As your margins increase, CEC will support your growth by providing monitoring systems to track and tune operations, equipment maintenance, retro-commissioning and upgrades, and generator, solar and back-up power.

## BENEFITS

The benefits of choosing Commercial Energy Consulting include increased average daily and occupancy rates, less maintenance and breakdowns, enhanced reputation and customer attraction, cash flow from utility incentives, and income gains from lower operating costs.

*"The [economic analysis] support information was exceptional in that it allowed for easy reconstruction of outcomes from proposed improvements. The plan also provided a comprehensive recommendation for application of state-sponsored grants and incentives."*

— DANIEL E. MEYER, PE., NRCS, USDA

*"CEC's results have been very useful to the customer as they navigate the decisions about energy priorities. They have been very useful to me in the selection and design of retrofits to existing systems."*

— CHRIS GUNTERMANN, HORTICULTURAL SERVICES INC.

*"CEC will not let you down. They know and do what it takes to make things happen. Throughout our hotel's boiler and solar projects, CEC diligently and generously dealt with the challenges of installing large and innovative energy systems."*

— STEVE LEE, BEST WESTERN INN AT THE MEADOWS
